SUMMARY

Final-year B.Tech (ECE with AI specialization) student seeking a Data Analyst role. Completed end-to-end analytics projects covering data cleaning, multi-source SQL analysis, Python EDA and Power BI dashboards, each ending in business recommendations. Strong in SQL, Power BI and Python, with interest in sales, customer and product analytics.

SKILLS

Data Analysis: SQL (MySQL: joins, CTEs, aggregations, date-based analysis), Python (Pandas, NumPy), Excel, EDA, Data Cleaning, Data Validation
BI & Visualization: Power BI, DAX, Data Modeling, KPI Dashboards, Matplotlib, Seaborn, Data Storytelling
Tools & ML: Jupyter Notebook, Git/GitHub, Scikit-learn (regression)

PROJECTS

Sales Analytics Dashboard GitHub

Power BI | MySQL | Excel

- Built an interactive Power BI dashboard on 3,002 sales records ($4.14M total sales) with KPI cards, map view, monthly and daily trends, and Top-10 product, store and sales-rep views.
- Found that the top 3 categories drive 51% of profit, Canada and the US contribute 33.82% ($1.4M) of sales, and 18.6% of all discounts sit in Home & Kitchen, flagging a margin risk.
- Prepared and analyzed the data in MySQL using joins, aggregations and grouping.

Air Purifier Market Analysis GitHub

MySQL | SQL | Excel

- Combined 4 datasets (AQI 2022-2025, disease surveillance, vehicle/EV registrations, population) using SQL joins, CTEs and aggregations to identify high-risk, high-population cities for market entry.
- Showed that EV adoption alone does not explain better AQI, and recommended prioritizing cities where persistent poor air quality overlaps with large population and health burden.
- Compared weekday vs weekend AQI and dominant pollutants (PM2.5/PM10) by state to guide product and market-entry recommendations, delivered as a business presentation.

AI Job Market Analysis 2025-2026 GitHub

Python | Pandas | NumPy | Matplotlib | Seaborn

- Validated and analyzed an AI job-postings dataset (missing values, duplicates, distributions) to study salary drivers by experience, country, work mode and LLM vs non-LLM roles.
- Found a consistent salary premium for LLM roles, remote pay competitive with on-site, Python/ML/cloud as the most requested skills, and higher 2026 posting volumes in most months.
- Compared LLM and non-LLM roles within each experience level rather than overall averages, avoiding misleading conclusions.

EDUCATION

Indira Gandhi Delhi Technical University for Women, New Delhi 2023 - Expected 2027
B.Tech, Electronics and Communication Engineering (Specialization in AI)

The Vivekanand School, Delhi 2022 - 2023
CBSE Class 12 | 89.6%

CERTIFICATIONS & ACHIEVEMENTS

- **Paranox 2.0 Hackathon:** Finalist, Top 40 out of 5,000+ participants
- **Delhi Yuva Startup:** Top 100 selection | **Women Start-a-thon:** Selected among 20,000+ applicants
- **Certification:** Python and Machine Learning: Data Cleaning and Data Visualization
- **Certification:** SQL with AI: Data Analysis using SQL and MySQL
